Subject: Extended Travel Z26

New 18 mm Metric Stroke Offering

Haydon Switch & Instrument, Inc. is pleased to announce a new metric stroke of 18mm available on the Z26000 captive linear actuators. This new extended travel offering is available in a wide variety of resolutions ranging from 0.0127mm to 0.1016mm per step and offers up to 4.5 Kg of force.

Utilizing rare earth magnets, the Z-series linear actuators consistently deliver exceptional

performance based on an innovative new design which dramatically reduces costs without compromising performance. Providing an elegant solution for linear movement, OEM's can reduce components and simplify designs by replacing rotary motors which generate linear movement through belts and pulleys or rack and pinions with the Z26000.

All Z series linear actuators are designed for low or high volume applications. The simplified design and metric dimensions make the Z26000 series ideal for the global marketplace. Typical applications include medical devices, small machinery, instrumentation and virtually any applications where precise linear motion is required in high volumes.
