**FAQ**

## **Programming: Loading programs remotely**

**Q.** Is it possible to load program files (project) into my Trio controller without using Motion Perfect 2?

**A. Yes.** For distributors building machine applications with programs like Visual Basic, we now offer the **AutoLoader** program. By editing a simple text script file (\*.TAS) that instructs AutoLoader what to send, you can launch from a VB application. This is ideal for customers looking to update their controller program files from within their standard HMI interface.
